Fire Safety

Avoiding loss and controlling fire safety risks

At Amalgamate we believe in the importance of working in partnership with organisations to develop smart health and safety solutions – benefiting both employees and business.

As an established consultancy we successfully deliver effective solutions across Europe, the Middle East and Asia supporting large-scale global organisations, SMEs and business start-ups. Our aim is to pro-actively manage the varied health and safety needs of our clients, and reduce the impact of loss on their business.

Businesses in the UK are legally required to maintain high standards in regard to fire safety. They must ensure that their premises are fire safe, and that their staff are suitably trained in fire procedures. They have to organise fire risk assessments to be conducted, and amongst other things, may need to check that smoke alarms and fire-fighting equipment are present and functioning properly, consider evacuation strategies for vulnerable people, or deal with the storage of hazardous materials. That's a lot of work, and a lot of specialist knowledge is needed. That's where we come in.

THERE WERE 10,600 Fires in Workplaces

in the UK 2011—2012

Philosophy.

We appreciate that the effects of fire on a business are obvious. However, many organisations need additional support to effectively manage their fire safety risks. And that's fair enough - you probably have enough things to focus on in your business, being a fire expert is not at the top of your list. Luckily, we can help.

In simple terms, managing your fire risk well is good insurance against the potential loss of life, property damage, and business interruption. Our fire safety solutions help you to avoid such losses, and control fire risks effectively. We use experts in their field to assess your workplaces, and provide guidance in improving your fire safety standards.

Methodology.

Our fire specialists are experienced in working in a wide variety of different environments, and will ensure that you receive the best possible guidance. They will visit your premises to undertake the necessary surveys or assessments, then provide you with a clear and concise report that enables you to take action swiftly to protect your staff and assets.

Services.

We offer a comprehensive range of services, and can provide a package that is tailored to your business's specific requirements. This can include:

Fire risk assessments

– we help you to identify all the fire hazards and risks in your workplace, and establish ways of amending them.

Fire Safety in Construction

– specialist guidance on high risk environments.

Compartmentation and Fire Door surveying

– focusing on features to prevent the spread of fire, and increase the time available for emergency evacuation procedures.

Fire safety training (Fire Warden, carry down procedures, fire extinguisher, scenario based learning)

– a range of training to support your business needs and legal requirements.

Fire safety strategy development (emergency evacuation procedures, Personal Emergency Evacuation Plans)

– comprehensive strategies to cover a range of scenarios.

Fire Safety Systems Auditing

– assessment of your existing systems and recommendations for improvements.

Experience.

Our specialised knowledge enables us to advise you on what is necessary to fulfil legal requirements, as well as what is best practice for your type of environment. Our training team has a wealth of relevant experience – if you're looking for people with expertise, then former Senior Fire Officers are a great place to start. We have years of experience dealing with fire risk in a range of different sectors and complex environments, and can utilise that knowledge to establish the best ways to protect your people and assets.

25 People Died

in the UK 2011–2012 in non- residential fires, and 1,200 people were injured.

In a quarter of non-residential fires, the cause was faulty appliances or leads – many of these would have been avoidable if the correct scheduled safety testing had taken place.
